

Pie Frey, Psy.D., TRAINER

Brainspotting (BSP) is a powerful, brain-based, treatment modality that bridges the gap between mind and body. Focusing on identifying the physical correlates of a client's issues, it provides an anchor that grounds the patient while simultaneously stimulating an incredible associative process. This leads to the processing and release of the core neurophysiological sources of emotional/body pain, trauma, dissociation, performance anxiety and an array of other challenging symptoms.

This 3-Day Phase 1 BSP training utilizes an open, integrative model, which includes Dual Attunement Frame, Inside Window BSP, Outside Window BSP, and Gazespotting.
